VILSANDI PANDORA DREAM

Compact futuristic tiny house with a distinctive design for seasonal or year-round use for those who want to stand out!

Vilsandi Pandora Dream is a modern and thoughtfully designed tiny house that combines an open layout with a high-quality timber structure. Large glass surfaces bring plenty of natural light into the interior and create an open and cozy atmosphere. Sliding insulated glass panels on the side allow the building interior to be opened instantly, connecting the indoor and outdoor areas into one unified space.

The interior layout of the house is flexible: the rooms can be designed according to needs, whether for accommodation, a guest house, or a rental unit. Thanks to the smart layout, it is possible to create a comfortable and functional environment for both short-term stays and longer visits.

The walls of the building are made from durable WXP timber panels, ensuring good stability and a long service life. The roof is built from WHP panels, produced from two different cross-section timber elements connected with special nails.

Pressure-treated timber used on the terrace and the strong frame structure make Pandora Dream a durable solution even in Nordic climates.

Exterior Construction

Roof

WHP rib ceiling panel, EPDM rubber roof

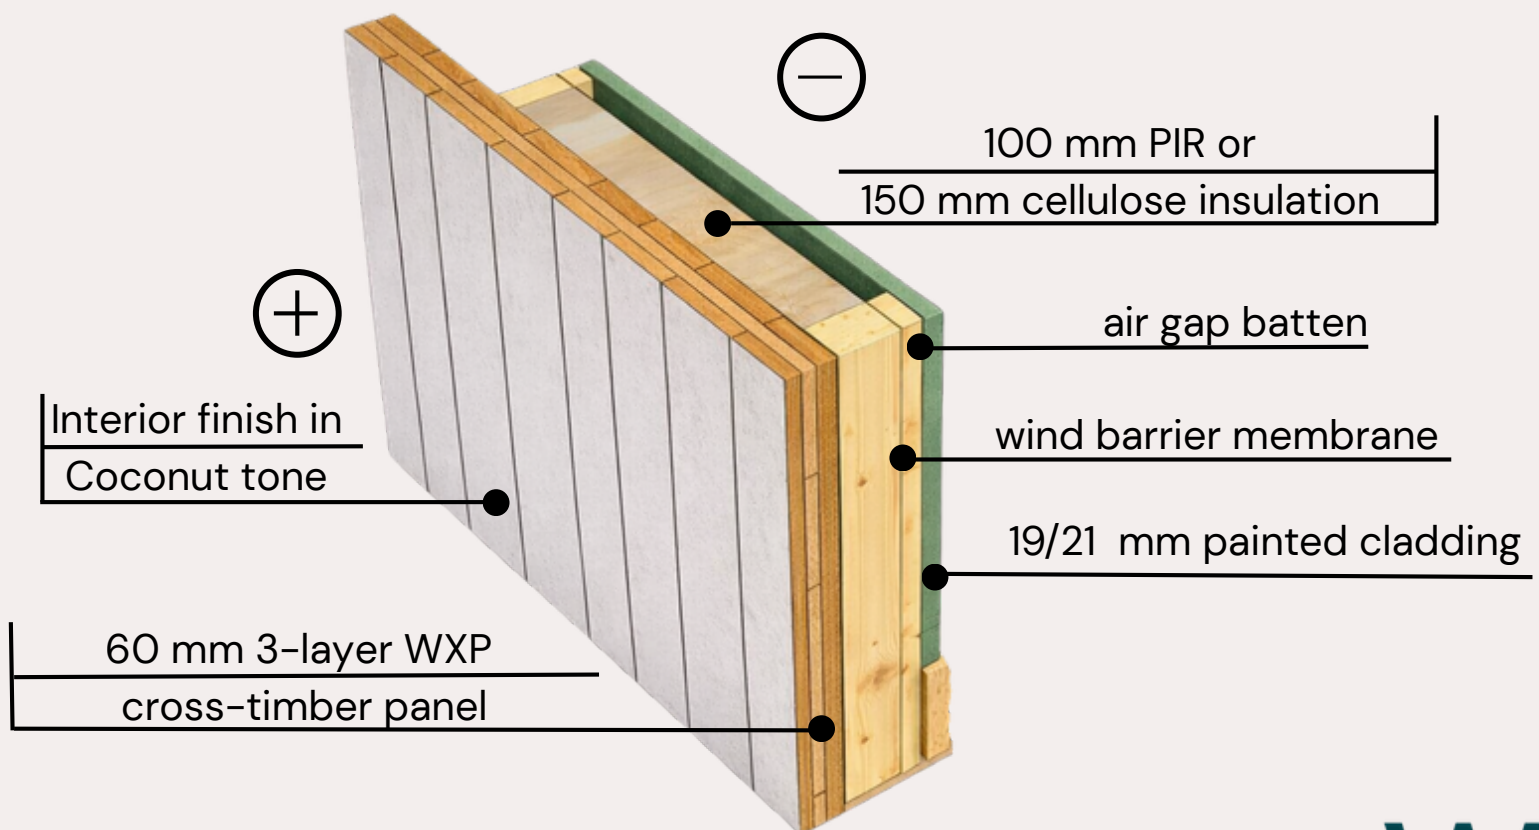

Exterior wall (outside to inside)

- 60 mm WXP3 cross-laminated timber panel
- Interior finish in COCONUT white tones

Optionally available with a 100 mm WXP5 wall panel solution or additional wall insulation for year-round use.

Floor

- 28 mm floorboard or vinyl flooring / pressure-treated brown pine decking outdoors
- 145 mm impregnated floor frame structure
- Rodent protection mesh around the lower perimeter

Windows

Tempered double-glazed units

Fixed glass façade

Opening side windows according to the project

Exterior door according to the selected solution

Electrical and Technical Solutions

LED lighting indoors and outdoors

Electrical outlets and switches according to the project

Electrical distribution board

Air-to-air heat pump

Mechanical ventilation in the bathroom, fresh air vents in the bedroom

Gustavsberg sanitary ware in the bathroom

VILSANDI PANDORA DREAM - Version 1

Net internal area: 15.1 m²

Living and sleeping area: 13.64 m²

WC: 1.50 m²

Building type: compact tiny house / modular building

Layout: open single-room solution

Purpose of use: seasonal use / non-insulated building

Layout includes:

Open living and sleeping area

Compact kitchen solution

WC

VILSANDI PANDORA DREAM - Version 2

Net internal area: 15.0 m²

Living and sleeping area: 12.98 m²

WC: 2.07 m²

Building type: compact tiny house / modular building

Layout: open single-room solution

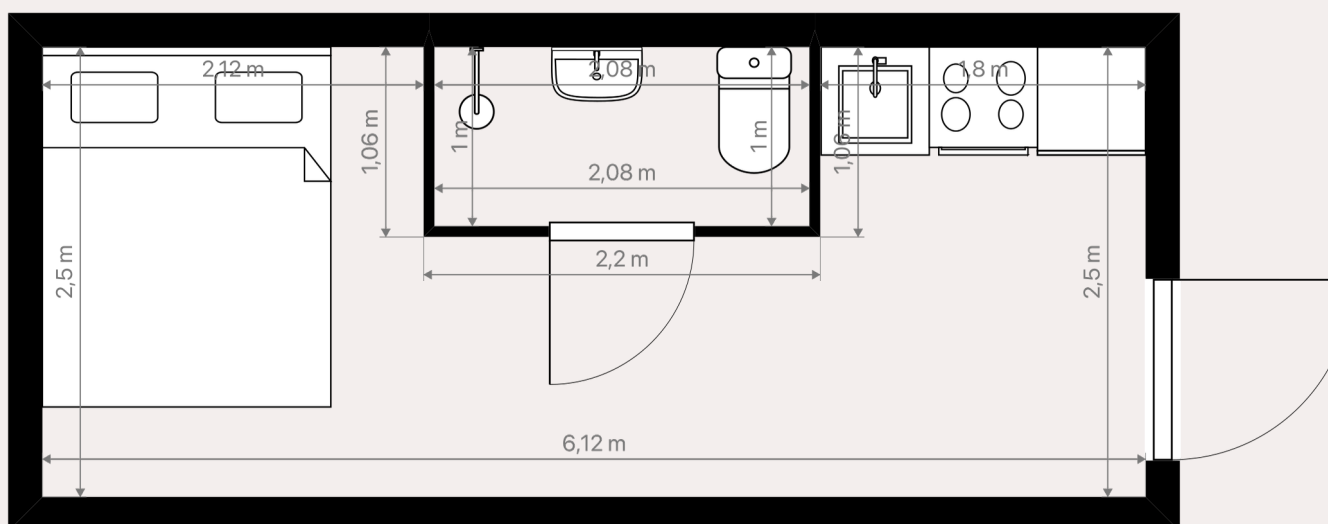

Purpose of use: seasonal use / non-insulated building

Layout includes:

Open living and sleeping area

Compact kitchen solution

WC

VILSANDI PANDORA DREAM - Version 3

Net internal area: 15.1 m²

Living and sleeping area: 12.65 m²

WC: 2.50 m²

Building type: compact tiny house / modular building

Layout: open single-room solution

Purpose of use: seasonal use / non-insulated building

Layout includes:

Open living and sleeping area

Compact kitchen solution

WC

VILSANDI PANDORA DREAM - Version 4

Net internal area: 10,75 m²

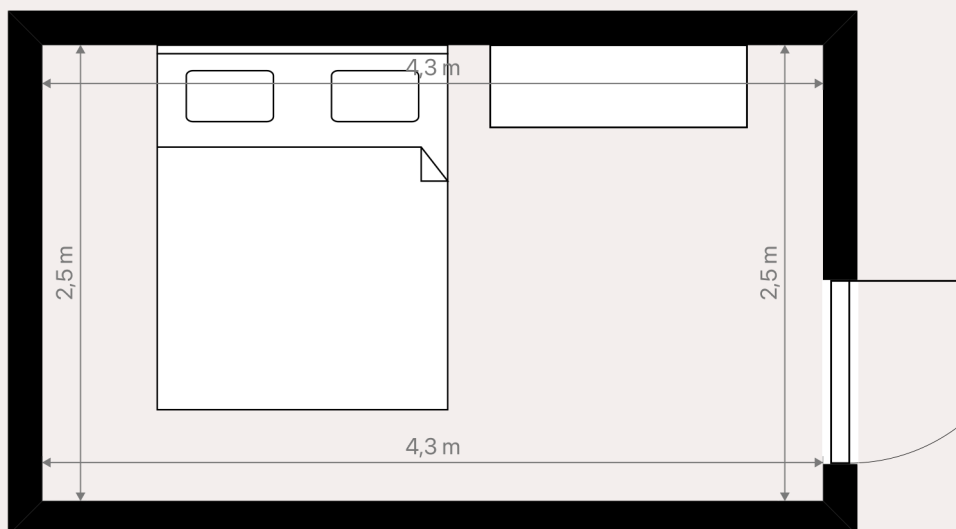

Building type: compact tiny house / modular building

Layout: open single-room solution

Purpose of use: seasonal use / non-insulated building

Layout includes:

Open living and sleeping area

WXP Cross Timber Technology

Woodsonsi cross timber panel (WXP) consists of profiled cladding boards that are connected with nails. The boards are arranged in cross layers, ensuring the strength and durability of the panels while preventing warping and twisting.

This technology provides stability to the wood, maintaining the dimensions of the elements over time, even as the material dries. Woodsons panels are manufactured industrially, and through controlled production processes, consistent quality is ensured.

EKOISO Cellulose Insulation Wall System

Why choose WXP cross-laminated timber panels?

No glue or chemicals

Layers are mechanically fixed without adhesives.
No harmful substances.
Suitable for allergy-sensitive environments.
Lower CO₂ footprint compared to glued timber or concrete.

Healthy indoor climate

Wood naturally regulates humidity.
Does not emit harmful substances when heated.

Fire resistance

Solid wood chars slowly and predictably.
Structure retains load-bearing capacity longer.
Does not release toxic gases when burning.

Strong and stable structure

Reduced warping and cracking.
Durable and long-lasting construction.

Acoustic comfort

Solid wood absorbs sound effectively.
Less echo and more comfortable spatial experience.

Natural finish

Natural wood surface creates a warm atmosphere.
No additional finishing always required.

Building your new home together

We help you create a home that combines natural materials, modern construction, and long-lasting quality.
